

Nepal Rasuwa Flood Situation Report No. 6

As of 3 September 2026

This report is produced by the Office of the United Nations Resident Coordinator in Nepal, in collaboration with humanitarian partners and the Office for the Coordination of Humanitarian Affairs (OCHA). It covers the period from 2 to 3 September 2026.

HIGHLIGHTS

- So far, reports indicate that the Rasuwa floods have claimed 1,259 lives, with 5,083 people still out of contact and 12,038 rescued (NDRRMA, 3 September, 19:00).
- 3,844 displaced people are living in 34 displacement sites in Nuwakot, Rasuwa, Dhading, and Kathmandu. IOM is supporting the Government's response through the Displacement Tracking Matrix (DTM) and estimates 4,288 households were affected by the floods, of which 2,886 households were displaced.
- Access continues to be a constraint, with road blockages limiting the transportation of relief supplies to affected communities.
- Activated on 27 April, the Global Logistics Cluster in Nepal is supporting humanitarian partners through coordination, information management, GIS mapping, and work with the Ministry of Home Affairs to prevent logistics bottlenecks.

8,044

People displaced in 8 assessed municipalities (IOM/DTM as of 31 August)

12,038

People rescued

1,259

Casualties

5,083

People missing

84,000

People in need of emergency WASH support

2.2M

Tonnes of debris estimated across Bhotekoshi - Trishuli area

SITUATION OVERVIEW

More than a week after the 26 August flood, search and rescue has largely given way to relief operations. NDRRMA reports 1,259 deaths, 5,083 people out of contact and 12,038 rescued. Access remains the principal constraint, with damaged roads and bridges slowing the movement of relief supplies into upper Rasuwa, and several locations reachable only on foot.

Alongside the Government of Nepal, the Humanitarian Country Team launched a [Flash Appeal](#) in support of the Government-led response. **The appeal seeks US\$49.6 million to provide life-saving assistance to 84,270 people (19,284 households) in 17 municipalities across six districts: Rasuwa, Nuwakot, Dhading, Chitwan, Gorkha and Tanahu. All identified affected people are targeted, of whom nearly 40 per cent are children.**

Requirements cover ten sectors through the end of 2026, with roughly three quarters concentrated in five: food security (US\$7.94 million), WASH (US\$7.9 million), health (US\$7.6 million), logistics and emergency telecommunications (US\$7.33 million) and shelter (US\$7.1 million). The appeal complements the Government's Official Disaster Relief Appeal of 27 August and the NDRRMA-led operation. It is a time-bound humanitarian response, not a recovery plan; recovery and reconstruction needs will be addressed through the Post-Disaster Needs Assessment.

To sustain the immediate response ahead of the appeal, the CERF allocation has been recalibrated to US\$2.5 million, prioritizing life-saving assistance in the worst-affected districts.

The Logistics Cluster has been activated to support partners with logistics coordination, information management and common services, working with the Ministry of Home Affairs to identify and address transport bottlenecks. With WFP's support, a coordination base for the UN and partners is being established in Bidur, Nuwakot, providing shared operational and office space for agencies and cluster coordinators working closer to affected communities.

HUMANITARIAN NEEDS AND RESPONSE

Food and non-food items are in sufficient supply in the market areas in Bidur - Nuwakot. Relief supplies continue to build up in Nuwakot, as access challenges hinder the delivery of assistance to many of the most severely affected communities in Rasuwa.

Protection remains a key concern, as women, men, and children continue to share common spaces in displacement centres, raising potential protection risks and limiting privacy for vulnerable groups. Psychological counselling and social and behaviour change (SBC) interventions on personal and menstrual hygiene are needed.

Additional priorities include addressing WASH needs, improving displacement site management and tracking, establishing safe spaces for children, and providing specialized nutritious food to pregnant and breastfeeding mothers and children under five.

Camp Coordination and Camp Management

Needs:

- Identification and verification of all displacement sites and households staying with host communities, including tracking of movements to/from collective accommodation or other safe locations.
- Safe and adequate accommodation for people displaced in schools, open and makeshift areas along with coordination for essential services including protection and psychosocial support.
- Mapping of assistance coverage, priority locations, service gaps and potential duplication among responders.

Response:

- DTM Emergency Tracking Tool has been activated, and information is being collected through telephone interviews with government officials and local focal persons.

3,948

People displaced in 34 displacement camps in Nuwakot, Rasuwa, Dhading, and Kathmandu

- IOM, in coordination with NDRRMA and DUDBC, is conducting a joint verification of displacement sites. The assessment team deployed to Nuwakot on 31 August and assesses site locations, population and household numbers, capacity, occupancy, accessibility, management arrangements, duration of use, populations intentions, assistance received and service gaps.

Gaps & Constraints:

- The scale and location of displacement remain incompletely verified, with no consolidated national displacement figures.
- Damaged roads and bridges, unstable riverbanks, disrupted telecommunications, and damaged electricity infrastructure are restricting access as well as remote data collection, particularly to upper Rasuwa.
- Population movements are fluid, making site planning, service provision and beneficiary targeting difficult.

Emergency Shelter & Non-Food Items

Needs:

- Identification and registration of affected families and a Detailed Damage Assessment of households affected are urgent needs.
- Displacement centres in Bidur need internal management support.

10,000

People reached with emergency shelter and NFI assistance

Response:

- Approximately 10,000 people have been reached with in-kind assistance (emergency shelter, household kits and shelter kits).
- Data is being collected on the people living in displacement centres in Bidur, in coordination with the District Administration Office, Nuwakot.

Gaps & Constraints:

- Information is lacking regarding the number of displacement centres and the situation of the people arriving.
- Limited access due to downed roads and bridges has prevented identification of humanitarian needs and transportation of NFIs to the upstream area.

Water, Sanitation and Hygiene

Needs:

- Approximately 84,000 people (19,000 households) need WASH support across priority flood-affected municipalities.
- Immediate restoration of damaged water-supply systems and sanitation facilities; provision of alternative water supplies and water purification units; management of WASH facilities in temporary settings/displacement centers; and hygiene education and promotion to reduce disease outbreak and related public health risks.

84,000

People need emergency WASH support

Response:

- Ten WASH Cluster members are actively engaged in the WASH response across the three highly affected districts and are providing water purifiers, hygiene kits, and other critical WASH supplies.
- WASH Cluster partners are prioritizing rapid assessments, access to safe water, water-quality monitoring, emergency sanitation, hygiene promotion, risk communication, and support to temporary shelters, displacement centres, schools, and health-care facilities in affected areas.
- The Government is supplying water supply through water tanks in Nuwakot and restoring damaged water-supply systems in Nuwakot and Dhading.

Gaps & Constraints:

- Relief operations in several of the most affected areas continue to face access constraints due to damaged roads and bridges, landslides, and disruptions to electricity and communication services. Reaching these locations often requires alternative arrangements, including extended travel on foot.
- Data collection on emergency water-supply systems and temporary sanitation facilities in communities, public places, health-care facilities, and other institutions is still ongoing and undergoing verification.

Health

Needs:

- Surveillance is critical for water-borne, food-borne, and vector-borne diseases, including cholera, acute diarrhoeal diseases, leptospirosis, dengue, malaria, hepatitis A/E, and typhoid fever, as well as other communicable diseases that may increase following flooding and exposure to contaminated water, poor sanitation, overcrowding, and animal carcasses. There are already stockouts of scrub typhus testing kits at the Central Store of the DoHS and dengue testing kits (NS1+IgM) are limited.
- Provision of safe and dignified procedures for identification, handling, temporary storage, and management of dead bodies, with appropriate infection prevention measures and psychosocial support for families.
- Access to mobile and outreach SRH services for communities where health facilities are damaged, non-operational or inaccessible, alongside mental health and psychosocial support (MHPSS) for adolescents, pregnant women, and postpartum and lactating women.

4,911

People reached through in-person psychosocial counselling

Response:

- 4,911 people have been reached through in-person services (including mental health assessment), 2,695 received in-person psychosocial counselling, and 45 through helpline services; 514 people received counselling in the past 24 hours. A total of 112 personnel have been mobilized for in-person psychosocial health support and counselling, with 19 providing services through the helpline and 80 kept on standby for deployment as needed.
- Technical/medical personnel from EDCD, the Family Welfare Division, Curative Service Division and WHO deployed to Rasuwa and Nuwakot for post-disaster infectious disease surveillance and response. The team is also providing support to flood-affected areas on dead body management and environmental decontamination activities.
- UNFPA developed a list of pregnant and postpartum women in Rasuwa and provided reproductive health/newborn supplies, including baby warmers, RH kits, adolescent kits, and delivery kits.
- 101 women and 45 men received general health checkup, psychosocial counselling, sexual and reproductive health (SRH) consultation, gynecology checkup, and menstrual hygiene services at displacement centres and health facilities provided by the SPN mobile medical team in collaboration with UNFPA.

Gaps & Constraints:

- Gaps remain in timely information on clinical needs, continuity of essential health services, and referral capacity in affected areas.
- Critical shortages of skilled health personnel, including SBAs and obstetricians, constrain the ability to maintain 24/7 emergency obstetric and newborn care.
- The response remains unstructured and geographically uneven, largely due to difficult road access.

Nutrition

Needs:

- 1,685 pregnant women, 8,933 lactating mothers, 7,048 children under five years and 7,921 adolescent girls affected by the floods are in need of emergency Nutrition support.

25.6K

People need nutrition services

Response:

- Government officials are on the ground to coordinate nutrition interventions.
- UNICEF provided 2,700 cartons of Ready-to-Use Food (RUTF) to the Ministry of Health and Food Safety, which is estimated to help manage 2,600 cases of Severe Acute Malnutrition.
- The Nutrition Cluster coordinated with the Protection Cluster to establish a breastfeeding space for lactating mothers.

Gaps & Constraints:

- Limited access to Rasuwa.

** Food Security, Agriculture and Livelihoods****Needs:**

- Emergency agricultural recovery (seeds, tools, livestock feed, veterinary services and small-scale irrigation) to protect the coming planting season.
- Urgent food needs exist for approximately 2,152 households across three municipalities in Rasuwa. Total requirements are approximately 78 metric tonnes.

2,152

Households in need of food

Response:

- The Cluster supported Nuwakot (DLS) and Rasuwa (Uttargaya Municipality) with emergency veterinary medicines and disinfectants to help protect livestock health.
- Impacted households in Dhading and Nuwakot have, as of 4 September, received two weeks worth of commodities, consisting of family rations of fortified rice, lentils, vegetable oil, and salt.
- The Cluster is preparing to airlift remaining commodities from the Humanitarian Staging Area to impacted municipalities by helicopter and with heavy-lift drones.

Gaps & Constraints:

- As part of the upcoming Flash Appeal, the food security cluster has established overall requirements of US\$7.9 million of which US\$500,000 are unmet.

** Protection****Needs:**

- Urgently identify and register unaccompanied and separated children, trace and reunify families, provide follow-up support, and arrange alternative care for children who have lost parents.
- Ensure vulnerable children can access case management, referrals, community-based protection, psychosocial support, shelter, legal and documentation assistance, emergency aid, and specialized services.
- Strengthen child-sensitive, survivor-centred GBV prevention and response, including women- and child-friendly spaces, case management, clinical and psychosocial care, safe houses, dignity and menstrual hygiene support, confidential reporting, and safe referrals. Assessments found serious safety, privacy and dignity concerns, including inadequate sex-segregated bathing facilities and heightened risks for unaccompanied women. Safe, inclusive Child-Friendly Spaces are urgently needed for structured activities, psychosocial support, referrals, and caregiver information.
- Older women, persons with disabilities, and others with mobility limitations face barriers to assistance. They need tailored, accessible services, including outreach, psychosocial support, referrals, case management, and help overcoming mobility, isolation, and access barriers.

4,673

Women, children and adolescents reached

Response:

- Protection partners provided Psychological First Aid and psychosocial support to 1,231 people: 172 girls, 331 boys, 423 women, and 305 men. Four helplines are operational, supported by 25 deployed psychosocial counsellors.
- Partners identified 232 unaccompanied and separated children across displacement centres; verification and protection assessments are guiding care, family tracing and reunification, and referrals.
- Six Child-Friendly Spaces now provide about 200 children with safe environments for structured play, recreation, psychosocial support, and referrals.
- A rapid assessment with local stakeholders and affected women and girls found major safety, privacy, and dignity concerns, including unsafe bathing access and heightened risks for unaccompanied women. Findings are informing coordination and priorities.

Gaps & Constraints:

- Shelter management and accessibility gaps at some displacement centres heighten risks for children, women and girls, older people, and persons with disabilities.
- Limited MHPSS staffing, coverage, coordination, and referral pathways constrain support; stronger coordination is needed to expand coverage and prevent duplication.

Education

Needs:

- At least 20 schools are damaged, with 10 fully damaged, 10 partially damaged, affecting around 7,000 children. A further 80 schools located within 1,000 metres of the river have reportedly sustained varying levels of damage.
- Eight schools are being used as shelters (four in Nuwakot and four in Rasuwa) for community members displaced by the flooding, affecting the learning of an additional 1,300 children who are now unable to go to school.
- As a result, more than 10,000 school-age children require immediate psychosocial support to cope with trauma, continue learning, safely access protective spaces, and regain a sense of normalcy.

20

Schools damaged

Response:

- The Government, together with cluster partners, is coordinating with the respective Education Development and Coordination Units (EDCUs) to gather information on the status of children and teachers.
- The Cluster is also finalizing immediate response activities to establish temporary learning centres, provide psychosocial support for affected children and teachers, and prevent disease outbreaks.
- Cluster members are providing technical support for a government-led Rapid Needs Assessment in affected districts and two centers located in Kathmandu.

Gaps & Constraints:

- Information remains preliminary and is based mainly on reports from head teachers and local representatives. Detailed structural damage, student and teacher casualty figures, displacement, WASH damage, and exact financial losses require field verification.

Early Recovery

Needs:

- Clearing mud, rocks and debris from hydropower tunnels may take 3–4 months, according to the Nepali Army.
- Rescue teams are still clearing mud, debris and large rocks from hydropower tunnels; at Rasuwagadhi. Teams reached about 150 metres into the tunnel but were blocked by large rocks.
- NARMIN has requested the most severely affected Rural Municipal Executive Offices and Ward Offices to make temporary arrangements and resume essential local government services by the end

2.2M

Tonnes of debris
estimated across
Bhotekoshi-Trishuli area

of this week, with support for office furniture and equipment, ICT devices, communication facilities, basic administrative supplies, and other essential resources.

Response:

- The Cluster has initiated the mobilization of five Information Management and Early Recovery Officers to five local governments of Rasuwa and Nuwakot to strengthen field level information collection, verification, analysis, documentation and reporting.
- The Cluster has activated RAPIDA, its corporate geospatial early recovery needs assessment tool based on satellite/remote sensing data, and released its preliminary findings on 02 September 2026, as follows:
 - Estimated affected population is 84,270 people over 17 municipalities in 6 districts (Rasuwa, Nuwakot, Dhading, Chitawan, Gorkha and Tanahu)
 - About 76% of the population in affected municipalities lives with above-average pre-flood vulnerability, based on the Multidimensional Vulnerability Index calculated from Nepal's 2021 National Population and Housing Census.
 - An estimated 556,200 tonnes of building-related debris are associated with currently assessed buildings, with a broader indicative estimate of 2.2 million tonnes including personal property, vegetation, rock and sediment mobilized by the floods.
 - Preliminary modelling estimates USD 158.6 million in potential building damage, with a $\pm 30\%$ uncertainty range. This does not represent total disaster losses.

Gaps & Constraints:

- In Gosaikunda Rural Municipality, the main municipal office and two ward offices were washed away, with records and equipment lost. In Uttargaya, the municipal building and wards 1 and 5 were also swept away, affecting records, equipment and local administrative capacity.

Logistics

Needs:

- The partner survey launched on 1 Sep to identify gaps and needs for potential common logistics services. The early indications include transportation and airlifting non-food items (WASH, health, shelter), information on transport routes, and common office space.

Response:

- Coordinated with the Ministry of Home Affairs (MoHA) to expedite the customs clearance and tax exemption process. Agencies should provide the required details in writing to the NDRRMA, which will facilitate customs clearance. A focal person has also been designated at HSA to support this process.

Gaps & Constraints:

- The complexity of the emergency has created logistics coordination and operational gaps. Activation of the Logistics Cluster will help augment the humanitarian response through enhanced coordination, information management, and common logistics services in support of national efforts.

HUMANITARIAN COORDINATION

Personnel from the Resident Coordinator's Office and OCHA arrived in Nuwakot on 3 September to establish, together with partners, a base in Bidur to serve as a space for UN agencies to hold their operations and coordinate delivery of aid. Sector co-leads have been invited to share a registration form with the respective sector members being deployed to Nuwakot, Rasuwa, and Dhading.
